

Notes on Differential Privacy

Advanced Database Management, UNIBG

Stefano Paraboschi

Current significant limitations of DP

- (1) the necessity to keep a detailed track of the privacy budget and adapt the noise level based on the remaining budget
- (2) the huge difference in the level of noise between the local and centralized models
- (3) the limited scope of the query result that is compatible with adequate noise
- (4) the choice of values for privacy parameter epsilon (and delta, in the (epsilon,delta) model).
